

Two new cabin tractors arrive in Australia

Stock of two new utility cabin tractors from Korean manufacturer TYM has arrived in Australia. Powered by the German-built Deutz TCD 2.9 litre turbo diesel intercooled engine, TYM T68 and T78 tractors are fuel efficient, reliable and powerful with a dual dry-element air cleaner for Australia's dusty conditions.

Inlon's Sales & Marketing Manager Gary Surman said, "The 4-cylinder engine produces 67hp and 75hp respectively @ only 2200 engine RPM for optimal fuel efficiency.

"Importantly, the electronic engine governor holds the set engine RPM, under varying loads, delivering the maximum power of the engine when required, without RPM droops or spikes. This is ideal for PTO work, as the PTO speed is maintained without loss of RPM up to the maximum power rating. In comparison, an engine with a mechanical governor experiences RPM droops and spikes as the load varies in operation.

"Power shuttle transmission is 24 speed with 18 speeds under 10km/h for the TYM T68 and 16 speed with 11 speeds under 10km/h for the T78."

Other features include Power Shuttle with de-clutch, Auto PTO and Bosch electronic 3-point linkage. The premium air-conditioned cabin offers the ultimate and comfort and style.

Distributed Australia-wide by Inlon, the TYM T68 tractor loader package starts from \$74,900. The loader has a Euro hitch, GP bucket, hydraulic 3rd function and integrated loader joystick.

TYM tractors are renowned for high quality, well-designed products, backed by heavy research and development investment. For more information, please visit www.tym.ag/933 or call Inlon on 1800 945 090.
