

## Quiet launch for the TYM T613 Tractor

With impressively low NVH (noise, vibration, harshness), the new TYM T613 60hp tractor quietly replaces the previously successful and oldest TYM tractor in the range, the T603.

Gary Surman, Inlon's Sales & Marketing Manager said: "The launch was quiet in every sense of the word. Our COVID-safe policy meant we couldn't do a bells-and-whistles launch. And the Korean-made TYM T613 tractor delivers a quiet driving experience with its new styling, improved ergonomics and new smooth, quiet TYM 4-cylinder diesel engine."

This versatile utility ROPS tractor has a full synchro-mesh 12 speed transmission with the synchro-shuttle lever located under the steering wheel; it's ideal for loader work. The tractor weight of 1,960kg is a reflection of the heavy duty transmission, driveline and axles. The tractor weight is in part, a result of the heavy front axle, which is important for a tractor fitted with a front end loader as substantial forces are applied during loader operation. An impressive 52 degree turning circle gives plenty of manoeuvrability in small spaces.

Two speed independent PTO comes as standard with 540 and 540E saving fuel on the less demanding PTO work such as raking or tedding hay. The high capacity hydraulic pump (42 litres per min) provides fast loader operation, while two double acting remotes will help suit a wider range of tractor attachments. The steering has its own 19 litre per minute pump.

Ergonomically, the TYM T613 is a pleasure. A flat deck floor provides a wide comfortable platform for the operator with

the suspension seat ensuring a soft ride. The generous wide access makes it easy to get on and off the tractor. There's easy access to the diesel tank, which is situated beneath the platform with unobstructed access to the filler point.

With an Aircon Cabin and HST version coming soon, the T613 will offer a comprehensive range in the mid-hp utility tractor market.

Inlon's TYM T613 tractor package includes a self-levelling loader with 4-in-1 bucket, joystick control and a Euro hitch to easily use and change a wide range of attachments. Under the Federal Government's current stimulus package, the T613 tractor is an eligible product for an instant asset write off.
